

MAP OF THE PARK

At Terra Natura Benidorm we care for animals of endangered or vulnerable species within the programs run by the European Association of Zoos and Aquariums (EAZA), through the different EEP's (European Endangered Species Programmes), international (in situ) Conservation Projects and SB (Studbook) Breeding Programs.

We work with passion and respect for the physical and emotional well-being of animals both individually and in species by understanding their nature, their care, their needs and threats in their natural environment. Terra Natura's animals receive attention from a specialized team of zookeepers, biologists and veterinarians 365 days a year.

With your visit you actively contribute to make these projects a reality. Thank you very much.
